

INVESTING BASICS

TIP #1

START EARLY

Giving your investments time to grow will allow for a higher rate of return. More time to grow your investments also creates room for learning opportunities, so there is less pressure to earn money back immediately.

EDUCATE YOURSELF

TIP #2

Learning about the different ways to invest and what to invest in is very important for the growth of your investment portfolio. Identifying the risks and advantages of certain investments can dramatically change the rate of return of your portfolio.

TIP #3

STAY CONSISTENT

Avoid making any decisions based on emotions or unreliable social media resources. Staying consistent with your money invested each month/year is a great way to ensure that you are not investing beyond your means.
