

# How Income Groups Pay Off an Unexpected \$400

Note: This graph represents how quintile groups would pay for an unexpected expense of \$400. The difference between the mean percent of credit in full, credit over time, borrow, could not pay and quintile is statistically significant at 5% level. Bank loan is not significant at the 5% level. This data is from waves 3 and 11 from the Coronavirus Tracking Survey of the Understanding America Study.
