BROAD RESEARCH INTERESTS AND AIMS

I founded and direct the Georgia Center for Developmental Science ([GCDS](#)). My research aims to advance an interdisciplinary approach to developmental science, investigating resilience by elucidating the biobehavioral mechanisms and diverse environmental contexts influencing human development. Focused on the complex interplay between chronic psychosocial stressors (such as violence, poverty, and discrimination) and adolescent adjustment, my work seeks to unravel how these factors contribute to health risk behaviors and resilience. Employing a multilevel (from neighborhood to neural level) multimethod (fMRI, psychophysiological, observational, and survey data collection) approach, I aim to generate empirical insights to inform effective interventions and policies for fostering positive youth development under adversity.
